
***The HD-1 Erases
Hard Drives* and DLTs in Seconds.***

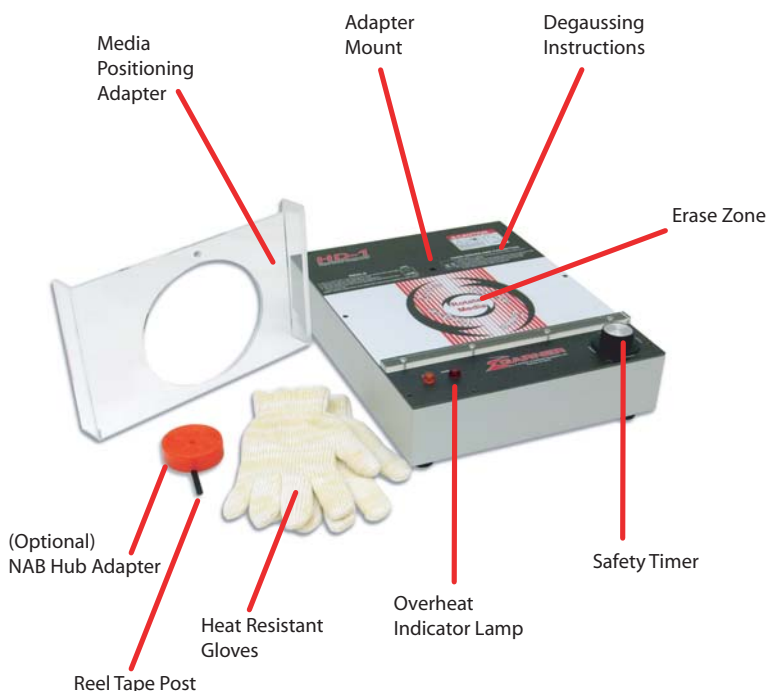

***Degaussing helps you comply with GLB Act and
HIPAA mandates by completely erasing all infor-
mation before media re-use or media disposal.***

The HD-1 Professional Degausser is specifically designed to erase higher-coercivity media, such as hard drives* and DLT's (DLT I-IV). Additionally, the HD-1 effectively erases all metal particle formats such as AIT, DLT I-IV, Beta SP, Beta SX, Digital BetaCam, D1-D5, 3590, 3490 and more.

Please note: hard drives are **NOT** reusable once degaussed. Due to the hundreds of media formats the HD-1 will erase, not all formats are mentioned. Please call us if you have questions regarding your specific format.

For long-lasting performance, the degaussing coils are vacuum dipped and baked. The vacuum process draws the air out of the coil allowing the potting compound to coat each winding of the coil. The coil is then baked "rock hard" to eliminate the vibrations that could eventually lead to shorts in the windings of the coil. In addition, two thermal detection units have been wound into each coil to ensure that the operating temperature is safely maintained. When in operation, the coils are cooled by a fan that is automatically turned on and off by signals being sent from the thermal detection units.

*** Due to shielding and proprietary advancements in coercivity levels of the data platters in hard drives, some hard drives may have to be disassembled before degaussing on the HD-1. Please see model [HD-3WXL](#) for a degausser that does not require hard drive disassembly before degaussing.**

SPECIFICATIONS	
Power Requirements (Please specify power requirements when ordering.)	10A @ 110 VAC, 50 or 60 Hz 5A @ 220 VAC, 50 or 60 Hz
Field Strength	4350 gauss
Dimensions	13 x 17 x 4 in. (33 x 43 x 10.2 cm)
Weight	Net - 42 lbs (19 kg) Shipping - 48 lbs (21.7 kg)
